

# Introduction

Welcome to my digital workspace!

I'm glad you found your way here. What you're looking at is the heart of my homelab: my personal knowledge base and "Second Brain." What started as a loose collection of technical notes has grown into a central hub for everything related to infrastructure, automation, and security concepts. This is where I document my experiments, refine best practices, and make sure that neither I (nor perhaps you) have to reinvent the wheel every time. At least I'm trying as best I can.

I do my best to keep the content fresh, usually updating these pages about once a week.

**A quick look under the hood:** This wiki is powered by **BookStack**, running in an LXC container on one of my Proxmox nodes right here at home. To ensure that browsing and learning here is as clear and accessible as possible, I use the **Atkinson Hyperlegible** font. It was specifically designed to increase character recognition and improve readability, making it the perfect fit for a technical knowledge base.

---

## A word on privacy (The simple version)

Your privacy matters to me. That's why I've stripped tracking down to the absolute bare minimum. If any analytics are running at all, it's either **Umami** or **Matomo**. Both tools are fully self-hosted within my own cluster. No external services, no annoying cookie banners—just transparency and data soul.

---

## My commitment to this project

To make browsing this wiki a smooth experience, I follow a few simple principles:

- **No dead ends:** I put a lot of effort into making sure all links work. If you do happen to stumble upon a 404 error, [just drop me a quick message](#)—I'll try to fix it as soon as possible.
- **Handcrafted content:** My articles aren't just "thrown together" by an AI. While I do use AI as a digital editor for proofreading, the thoughts, experiences, and configurations behind

them are 100% my own.

- **Always open for input:** If you spot a mistake or have a question, feel free to reach out.
- 

## Feedback & Connection

This wiki is a private passion project, completely ad-free and self-funded. Since running it takes both time and resources, I truly appreciate any feedback! If you find bugs or have suggestions for improvement, you can reach me via email or through the various communities I'm active in. Check out my [contact page](#) for more details.

---

## What else I'm up to

Besides this documentation, I manage several other technical projects. You can find an overview and a live dashboard [right here at zn80.net](#).
